Because AutoCAD Torrent Download is integrated with many other AutoCAD and other applications in the Autodesk suite, users may refer to an item or feature in a drawing using any of the following methods: If the item or feature name is provided, AutoCAD uses that name. The name of the drawing where the item or feature resides is used if the item or feature name does not exist in the current drawing. The name of the drawing or table where the item or feature resides is used if neither the drawing where the item or feature resides nor the item or feature name are provided. The name of a global component such as a legend or section is used as the item or feature name. The name of a local component such as a hatch, text box, or user-defined component is used as the item or feature name. If AutoCAD does not recognize the item or feature name, it prompts the user to enter the name or open the drawing where the item or feature resides. For information about editing an existing feature in the drawing, see Edit Features. To rename a drawing, feature, table, or component: Select Rename from the Drawing menu. The Rename dialog box opens. On the Rename dialog box, type a new name for the item or feature, then click OK. The new name appears in the dialog box. Heading This is a new paragraph I want to insert the "This is a new paragraph" after the "Heading". So after using insertBefore, which element has to be the prev next element? I tried to get the previous li, but that does not work. Is there any other way of doing this? A: Use insertAfter. li{ display: block; } Heading This is a new paragraph What this does is places the li after the next sibling of the li that already exists. Q: Entity Framework eager loading Consider following 3 tables (entity framework 6.1.3): public class User { public int Id { get; set; } public int CompanyId { get; set; } public virtual Company Company { get; set; } public virtual ICollection Orders { get; set; } } public class Company { public int Id { get; set; } public string Name { get; set; } public ICollection Users { get; set; } } public class Order { public int Id { get; set; } public int CompanyId { get; set; } }

The first largest wind farm to be approved by the UK's government is ready to get its grid connection. Energy firm Airtricity and Scottish Power Grid have signed a 10-year contract to link the west region of the Offshore Grid at South Stack to the grid at Grangemouth, Edinburgh. The grid link will power the new onshore interconnector between the two sites, which was completed last year. Once installed the link will offer low-carbon power to the UK's west coast, increasing the electricity available for domestic consumers. The contract – signed in November – will be valued at £110 million. Airtricity says the link will be the largest renewable energy interconnector in the UK, providing 13.5GW of electricity, equivalent to 50% of the west of Scotland's total electricity demand. Derek Mackay, deputy chief executive of Airtricity, said: "This is the first time a grid connection contract has been signed for Scotland, and as one of the first contracts to be signed, it will have a big impact on the future of renewable energy in Scotland and the west of Scotland. "The link will help to secure the future of onshore wind in Scotland and demonstrate our commitment to continuing to invest in the low-carbon energy sources that our customers want, which in turn will help the UK Government secure the best deal for energy consumers." Allison Ruchira, Scottish Power's energy policy manager, added: "This new link will help us to meet our future needs while reducing the need to build more nuclear power plants or gas-fired power stations. "It will also help us meet our power demands while supporting Scottish businesses and consumers to become more energy efficient." Renewables Minister Paul Wheelhouse said: "The decision to build and connect a new interconnector between Scotland and the rest of the UK is good news for businesses, consumers and the environment.
