Press File > Open on the Autocad screen and locate your target file. Select the file, press Open and then click OK. Click File > Export and select the export file type. Click Save That's it. You'll have an *.dwg file, which is the target file. You can also do it in AutoCAD. Open the file, click the Tools icon (the second from the right on the toolbar) and choose the File command. Find the Export to CDDW command (it's in the CAD section) and then the AutoCAD DXF (DWG) Import command. A: You don't need to use a converter, just try AutoCAD and export to DWG (when exporting you have a choice between DWG or DXF). A: I've been using 'Autocad2DWG' for several years and it has worked fine for me. The secret is to set the Target Filed attribute on your drawings and then export. Q: How do I change the font of a label? I have a label that I want to change the font to a bold font. I've gone into the properties and changed the font. However, when I look at the interface, the label is still in a regular font. Is there a way to actually get a font applied to the label? Also, once I have a font applied, how do I go back to my original font? A: Use the UIFontCache class to change the system font: UIFont *font = [UIFont systemFontOfSize:24.0f]; UIFont *boldFont = [UIFont boldSystemFontOfSize:24.0f]; [[UIFontCache sharedFontCache] setBoldSystemFont:boldFont forFontFamily:[UIFont currentFontFamily]]; // and [[UIFontCache sharedFontCache] setBoldSystemFont:font forFontFamily:[UIFont currentFontFamily]]; You can set the system font for the entire app by calling [[UIFontCache sharedFontCache] setPreferredFont:font forFamily:UIControlContentFontFamily] or setPreferredFont:forFamily: for a single control. This will apply the bold system font to all system fonts. If you want
