
on the Saudi-led coalition forces in the northwestern part of Yemen, according to military sources and an outside observer. In a related development, three Saudi soldiers have been killed in heavy fighting in the northwestern Yemen. In the first attack, a Saudi soldier was killed by a mortar shell on a military vehicle in the western province of Ibb. On the same day, Yemeni Houthis suffered heavy losses in an ongoing battle with the Saudi-led coalition forces in the northwestern Yemen. The Houthis have captured the town of Maja, which is adjacent to the border with Saudi Arabia. The Saudi-led coalition fighters have lost more than 25 soldiers in the recent clashes with the Houthis. Saudi Arabia and a number of its regional allies launched military campaign against the Houthis in March 2015, with the goal of bringing back the ousted President Abd Rabbuh Mansour Hadi to power. A whole range of parties, including the Houthis, Saleh loyalists, General People's Congress (GPC), Sunni Islamist Islah party and others, are participating in the coalition's forces. This article was edited by TheNewsMen. TheNewsMen.net is an independent news website supported by a team of volunteer contributors from the whole of Yemen. It is owned and sponsored by Ali Salem al-Manaiki. It was launched in 2014. The present invention relates to a process for the production of full-length single stranded (fragments) DNA from a double stranded DNA and also a novel nucleic acid amplification process. It is well known that DNA consists of a sugar-phosphate backbone with the nucleotides of the backbone attached either in a triphosphate or diphosphate state. More recently it has been shown that by using a polymerase, for example, Taq Polymerase, produced by the enzyme DNA polymerase, it is possible to catalyse the synthesis of single stranded DNA (ssDNA). The Taq Polymerase is known to be useful in DNA amplification 6d1f23a050
