UtiliPlayer is a video player that is developed with intuitive design. Not only is the application easy to use, but it is also highly configurable, has a clean user interface, plays any video file with no issues, supports subtitles and many more. The application is packed with tools and functionalities, such as: Volume control, preview, a file browser, a file properties viewer, the ability to add text to the video, a playlist, and information bar. We especially like the configurable information bar, which is displayed at the bottom of the screen. This feature allows you to easily access a setting menu and access your internet connection. Also, you can display the video info (release year, creators, duration, and type of video). You can use UtiliPlayer as a standalone application, or as part of a bigger software package. Not only is it compatible with Mac and Windows, but it can also be used via Wine and Virtual Machine. The program runs smoothly and has no errors in our tests. Unfortunately, the application has a not-so-serious downside; it doesn't include an option to enable to automatically open video files. But if you don't care about that, then you can get the most out of the application. We don't want to leave the users without any comment regarding this program.

If you are able to use this software as a standalone, that is the most perfect case, as there is no cost associated with this application. That being said, we have seen a lot of programs that charge a lot of money for the same services. Overall, the program is a great tool, so we recommend it to everyone that is looking to watch their video in a quick, easy and optimized manner.
