Anisotropic mass transport of colloidal particles in an elongated Hele-Shaw channel subjected to a uniform magnetic field. We have experimentally investigated the effect of an imposed uniform magnetic field on the dynamics of particles in an elongated Hele-Shaw cell. The size, density, and magnetic susceptibility of the colloidal particles are varied. Under the influence of an external magnetic field, we observe an anisotropic streamer to be formed. The field-induced anisotropic diffusion is found to be much faster than that in a pure gravitational field. The anisotropic transport caused by a magnetic field is also found to be enhanced in the presence of a secondary flow. 3a67dffeec
