December 17, 2011 - Capture stunning HD and 3D images or videos with the webcam; Accurate home video surveillance like never before; Easy to use and smart photo or video...>> More Every year, the number of home Wi-Fi routers that support Ethernet data transfer technology is steadily growing. These devices provide the ability to transfer large amounts of data without the need for a cable. This allows you to get rid of cable connections and greatly simplifies the process of connecting devices to the Internet. This technology also has its disadvantages, for example, it does not support video transmission.
